

The MICR Verifier is a portable tester combining simple, one-touch operation with sophisticated built-in analysis software. It has become the industry leader because of its durability and operational simplicity. With this affordable, easy to use tester, one can easily monitor the print quality of MICR documents. Ensure you have the most technically advanced MICR testing equipment available. Don't be exposed to the expense and embarrassment associated with MICR rejects.

Features and benefits

- Test for signal level strength, format errors, extraneous ink detection character and dimension errors
- Menu driven start-up screen
- Large back-lit display
- Simple one touch operation
- User programmable signal alarm levels
- Support multiple format specifications
- User friendly, minimal training required
- Operators can quickly identify problems
- Checks can be tested quickly saving time
- Allow user to monitor MICR quality to tight standards
- Ensure only the highest quality MICR production
- Test MICR documents to worldwide standards (E13B or CMC-7)
- Signal Level and Transport Calibration documents included
- Operator's Manual included
- Carrying case available
- Moving-head Verifier available (adjusts to check location)
- Upgrade to Qualifier diagnostic status yet maintain portability

Specifications

- Available for E13B or CMC7 MICR fonts
- Read head scans entire 5/8" MICR clear band
- Screen size: 9" x 1.75"
- Screens: nominal signal level, spacing errors, bar chart, extraneous ink characters, field analysis and actual signal level
- Adjustable screen contrast
- IBM ProPrinter support
- Footprint (flat) 12" x 13" x 8"
